Kairav Session 29

Sunday, October 4, 2026 8:34 PM

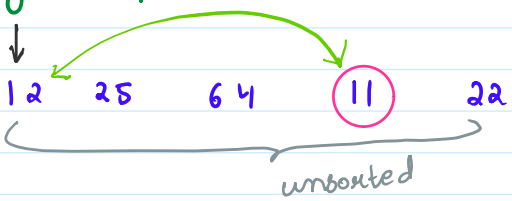

Selection Sort :-

→ It divides the list into 2 parts

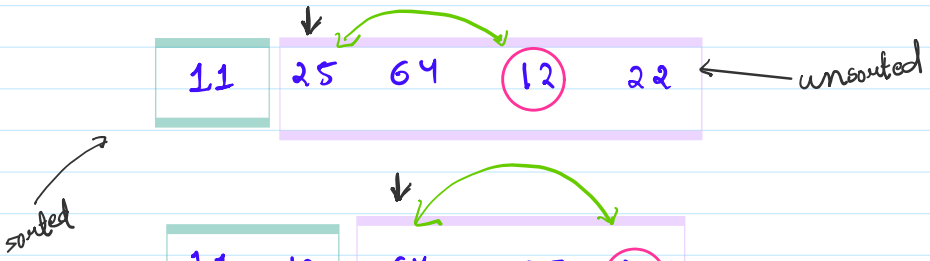

[12 25 64 11 22] sort → 11 12 22 25 64 ✓

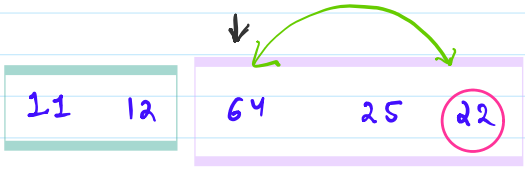

Step by Step :-

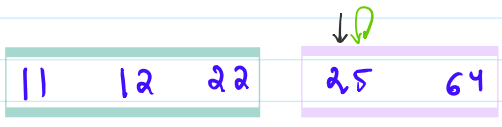

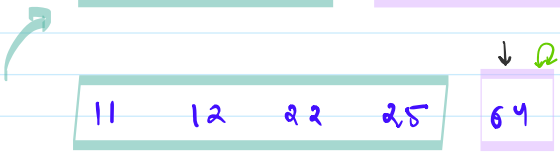

empty

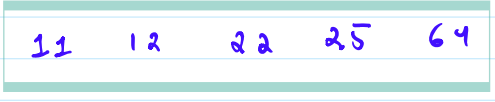

Sorted sublist → ( )

:-)

11 12 22 25 64

Algorithm :-

swapping pointer

1) $i = 0$ (pointer)

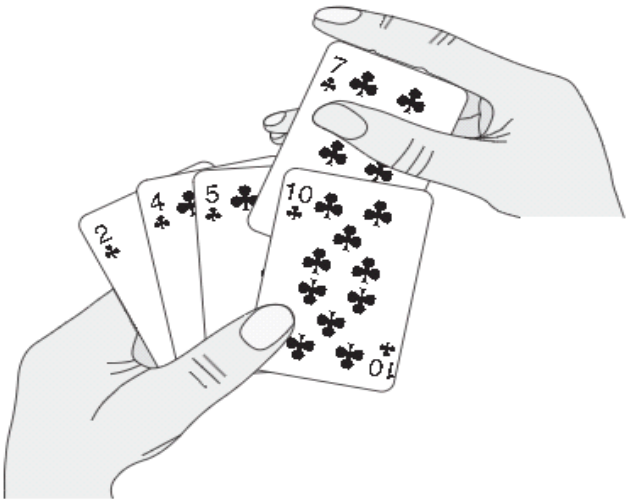

2) Searching for the minimum element index

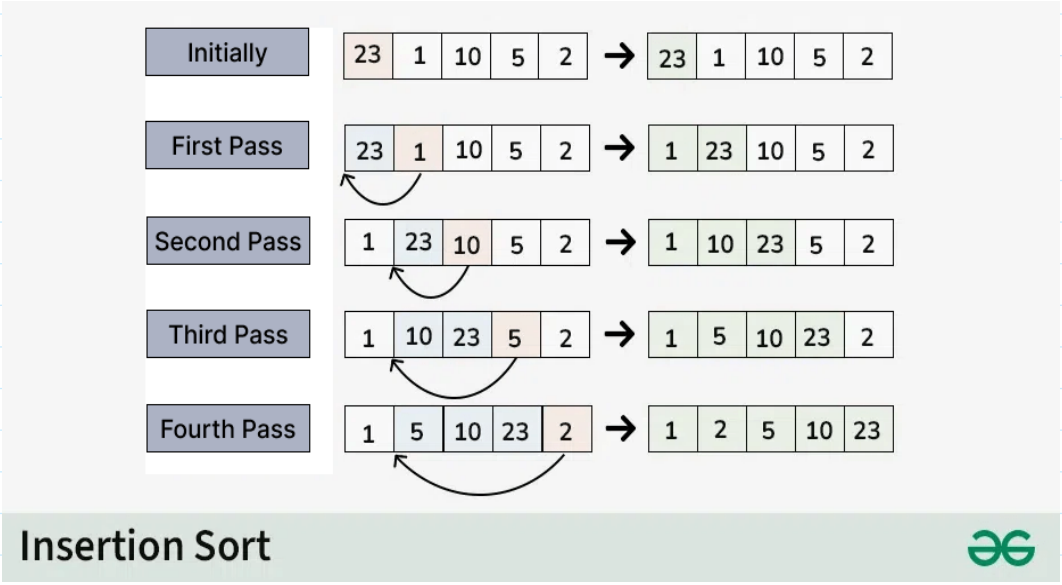

3) Swapping with the sorted pointer

4) Increasing the pointer value.

```
i=0
idx= min( list)
swap ( i , idx, list)
i= i+1
```

Insertion Sort :-

HomeWork:

Implement the code → AI

AI → ChatGPT (Any AI tool)

ChatGPT → Explain every line of code
